PROPOSED PLAN

ECOMMERCE WEBSITE

An e-commerce website is like an online store where you can buy and sell things. It's a website that lets you browse through products, choose what you want, and then buy them using the internet. It's like having a virtual shop where you can shop from the comfort of your computer or phone, and the things you buy will be delivered to your doorstep.

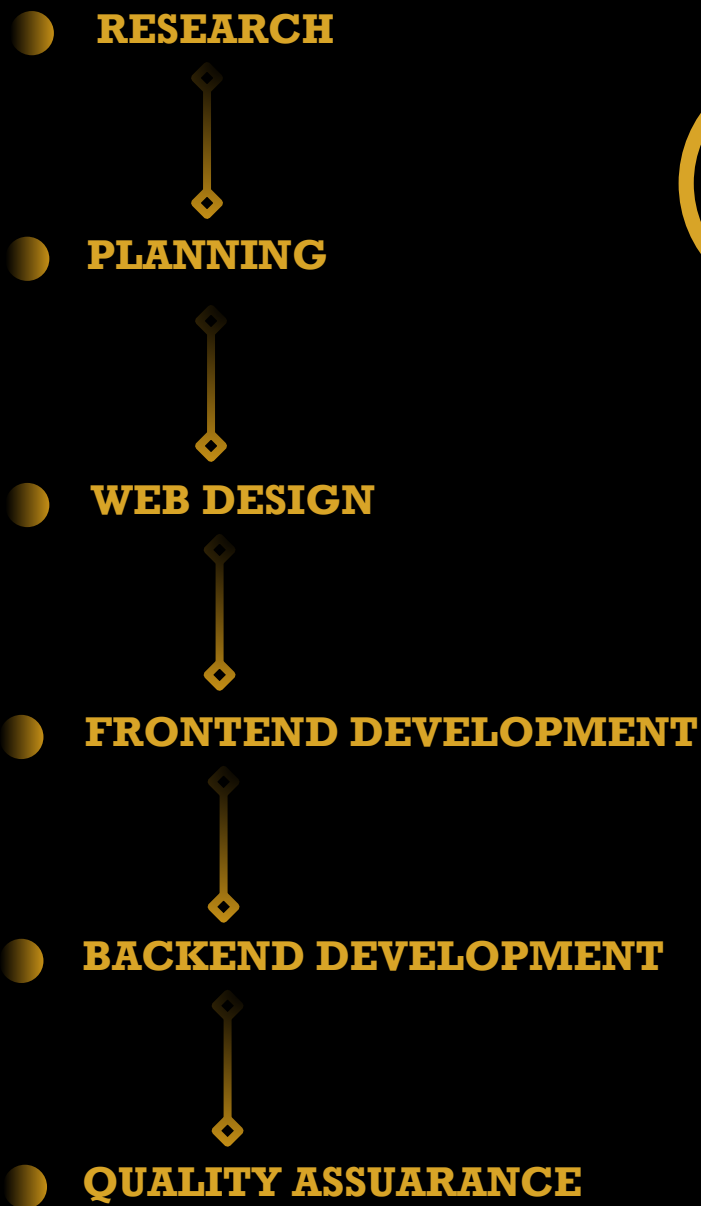

- **Online Shopping Spot:** An e-commerce website is like a digital store where you can buy things over the internet.
- **Easy and Convenient:** Using an e-commerce site is simple. You can pick what you want and buy it with just a few clicks, saving you the time and hassle of going to a physical store.
- **Stuff Delivered to Your Door:** After you buy something online, it gets sent to your home. It's like your shopping coming to you instead of you going to the store.
