WEB APPLICATION DEVELOPMENT

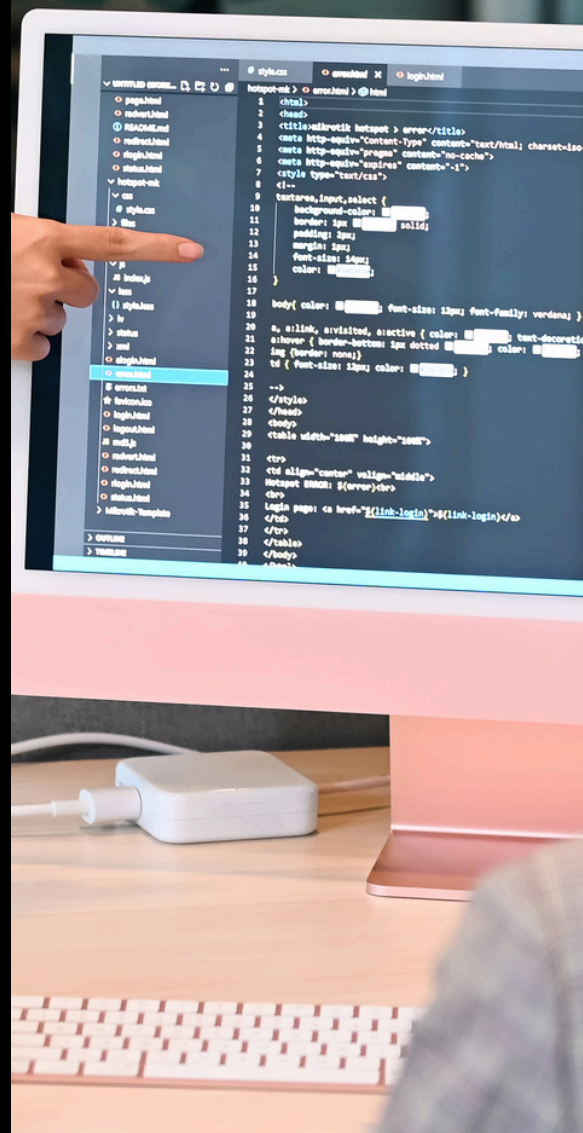

**WEB DESIGN &
DEVELOPMENT**

INTRODUCTION

WEB APPLICATION DEVELOPMENT

Web application development is the process of creating programs that you can use on the internet through a web browser, like Chrome or Firefox. It's like building tools or services that you can access online, whether it's a game, a social network, or a business tool. Developers use coding languages to make these applications work, and the goal is to create something useful or entertaining that you can easily access using a web browser.

PLAN

Our plan for web application development is to create a user-friendly and innovative online tool that meets the needs of our audience, providing a seamless and enjoyable experience.
